- Custom Contoured Medical Grade Mattress - internal
- Chamber Frame System
- Adjustable Bolster Supports
- Air Supply Hose Quick Release Connectors - Tygon (10ft)
- Matching Carry Bag - fits chamber bladder

What is Mild Hyperbaric Oxygen Therapy (mHBOT)?

mHBOT is a medical therapy in which a person is exposed to increased atmospheric pressure inside an inflatable chamber. The typical pressure reaches 1.3 atmospheres, which can also be expressed as 4 Pounds Per Square Inch. The increase in pressure allows more oxygen to reach the cells of the body which has many healing and therapeutic benefits.

Is it safe?

The hyperbaric Chamber is completely safe. Since our chambers use filtered ambient air, they can be used regularly without the danger of oxygen toxicity in the body. The majority of clients report a pleasant, comfortable experience. A physician's prescription is required prior to treatment.

Benefits of Renaissance Medical's Hyperbaric Chamber:

- Accessibility in a Medical Environment
- New state of the art equipment
- Patient/Caregiver Education & Training
- Family Friendly Environment
- Children and Family waiting area
